

Exciting News in Time for Pride Month

"HIV infection weakens the immune system, making someone highly susceptible to a large number of bacterial, viral, fungal and parasitic infections. The infected may also be vulnerable to certain types of cancers." Now the USA has been introduced to an all natural product that helps support the immune system. With over thirty years of research, Zuf Globus laboratories in Israel, developed clinically tested LifeMel Immune and now many in the US are benefiting from it.

Los Angeles, CA (PRWEB) May 20, 2008 -- The month of June is recognized as 'Gay and Lesbian Pride Month' since 2000. "This month is meant to recognize the impact Gay, Lesbian and Transgender individuals have had on the world. June is now the month of acceptance and the month to welcome diversity in communities regardless of sexual orientation." During this time thousands of people come together for parades, picnics, and celebrations. Along with the celebrating though, many remember those that have lost their lives to the battle with HIV and AIDS.

Like many of us know, the immune system is the body's first line of defense in maintaining health, preventing illness, and hastening recovery. The Mayo Clinic has stated, "HIV infection weakens the immune system, making someone highly susceptible to a large number of bacterial, viral, fungal and parasitic infections. The infected may also be vulnerable to certain types of cancers."

Now the USA has been introduced to an all natural product that helps support the immune system. With over thirty years of research, Zuf Globus laboratories in Israel, developed clinically tested LifeMel Immune and now many in the US are benefiting from it. Research has shown that supplementing the immune system can help us resist some illnesses and, with a strong healthy immune system, the body not only becomes more resistant to colds, flu, allergies and disease but quality of life improves. Life Mel Immune Support was developed to work specifically on the immune system.

Long term usage of LifeMel Immune (one teaspoon in the morning and one teaspoon in the evening) can result in an improvement in the functionality of the immune system and in the body's ability to resist infections and disease.

Some other benefits include: Assisting the body in recuperation and convalescence, supporting the natural ability of the immune system to maintain energy levels and fight fatigue, an immune system boost, and its is 100% natural and easy to take.

So now there is one more reason to celebrate during the month of June and everyday.
